List of Maps

1. Ownership Status.....	9
Map 1.1: Holdings owning agricultural land used in percent, by province: 2022	10
Map 1.2: Holdings renting agricultural land used in percent, by province: 2022.....	12
2. Agricultural Land Size.....	15
Map 2.1: Holdings with agricultural land size less than 2 hectares in percent, by province: 2022	16
Map 2.2: Holdings with agricultural land size of 2 to < 5 hectares in percent, by province: 2022	18
Map 2.3: Holdings with agricultural land size of 5 hectares and over in percent, by province: 2022	20
3. Crop Production (both parcel and homelot)	23
Map 3.1: Holdings reporting non-aromatic paddy rice production in percent, by province: 2022.....	24
Map 3.2: Ratio of area harvested to area planted for non-aromatic paddy rice, by province: 2022	26
Map 3.3: Non-aromatic paddy rice yield, by province: 2022.....	28
Map 3.4: Holdings reporting aromatic paddy rice production in percent, by province: 2022.....	30
Map 3.5: Ratio of area harvested to area planted for aromatic paddy rice, by province: 2022	32
Map 3.6: Aromatic paddy rice yield, by province: 2022.....	34
Map 3.7: Holdings reporting cassava production in percent, by province: 2022	36
Map 3.8: Cassava yield, by province: 2022	38
Map 3.9: Holdings reporting cashew production in percent, by province: 2022.....	40
Map 3.10: Holdings reporting mango production in percent, by province: 2022.....	42
4. Livestock and Poultry Production.....	45
Map 4.1: Holdings reporting large livestock production in percent, by province: 2022.....	46
Map 4.2: Total number of cattle, by province: 2022	48
Map 4.3: Holdings reporting small livestock production in percent, by province: 2022	50
Map 4.4: Total number of pigs, by province: 2022	52
Map 4.5: Holdings reporting poultry production in percent, by province: 2022	54
Map 4.6: Total number of chicken, by province: 2022.....	56
5. Aquaculture and Capture Fishing.....	59
Map 5.1: Holdings reporting aquaculture activity in percent, by province: 2022	60
Map 5.2: Holdings reporting capture fishing activity in percent, by province: 2022	62
Map 5.3: Holdings reporting fish catch used for home consumption in percent, by province: 2022	64
Map 5.4: Holdings reporting fish catch sold, by province: 2022.....	66
6. Main Intended Destination of Agricultural Production.....	69
Map 6.1: Holdings reporting agricultural production as mainly for home consumption in percent, by province: 2022	70
Map 6.2: Holdings reporting agricultural production as mainly for sale in percent, by province: 2022	72
7. Socio-Economics.....	75
Map 7.1: Holdings reporting “Work for other holdings using the production means of this holding” in percent, by province: 2022	76

Map 7.2: Holdings reporting 60%-100% share of household's total income accounted for by agricultural income in percent, by province: 2022	78
Map 7.3: Holdings reporting at least one severe shock in percent, by province: 2022	80
Map 7.4: Holdings reporting flood as the most severe shock in percent, by province: 2022.....	82
8. Labor	85
Map 8.1: Male household members working on the holding in percent, by province: 2022	86
Map 8.2: Female household members working on the holding in percent, by province: 2022	88
Map 8.3: Holdings with occasional workers (crop production) in percent, by province: 2022.....	90
Map 8.4: Holdings with occasional workers (all agricultural activities) in percent, by province: 2022.....	92
9. Irrigation and Environment	95
Map 9.1: Holdings using irrigation system in percent, by province: 2022	96
Map 9.2: Holdings managing waste by burning it on the holding in percent, by province: 2022	98
Map 9.3: Holdings concerned with a lack of water (drought) in percent, by province: 2022	100
Map 9.4: Holdings concerned with floods in percent, by province: 2022	102
Map 9.5: Parcels with soil quality worsening between 2017 and 2022 in percent, by province	104

Foreword

The Agricultural Statistics Maps from the Cambodia Agriculture Survey 2022 (CAS2022) are the data of the agricultural survey resulting from the hard work of statistics officers and the cooperation between relevant ministries, institutions, local administrative authorities at all levels, development partners and the Cambodian people in the 25 capital/provinces.

The results of the Cambodia Agriculture Survey 2022 are significant achievements that enable the Royal Government of Cambodia to better understand the agricultural situation in Cambodia, assist in information-based decision-making and are a strong input for the formulation of agricultural economic development policies. The agricultural maps in this report show the livelihood activities of Cambodian farming families. Through these maps, we can learn more about the legal status of households occupying agricultural land, land tenure, livestock, poultry and aquaculture in all provinces, effects of environmental changes on agricultural activities and economic characteristics of farming families in Cambodia.

Further details are available in the data tables and graphics that accompany each map in the Mapping Report and in the final report of the Cambodia Agriculture Survey 2022. The Ministry of Planning provides this agricultural statistics information free of charge, hoping that the investment in the survey and production of agricultural maps will provide the highest return on the sustainable management of our land and resources, ensuring food security, profitability and agricultural productivity, as well as the livelihoods of rural people. The Agricultural Statistics Maps provide us with an accurate basis for measuring changes in agriculture and the livelihoods of rural farming families.

Cambodia Agriculture Survey Data Map 2022 will be provided to all Ministries, Government Institutions, Development Partners, National Organizations, International Organizations, Research Institutions, the private sector and the general public who can use these findings as needed. This Cambodia Agriculture Survey data will serve as a basis for monitoring and evaluating the implementation of socio-economic and environmental development policies to achieve Cambodia's vision for 2050, which considers agricultural development as a core pillar of its Pentagon strategy of the Royal Government of Cambodia.

Finally, I wish to express my thank to the Royal Government of Cambodia (RGC), the Ministry of Economy and Finance, the Ministry of Agriculture, Forestry and Fisheries, Food and Agriculture Organization of the United Nations and the 50x2030 Initiative and all who participated in the work for this success. I would also like to thank all the relevant leadership, the management, and technical teams, enumerators, supervisors who made strong efforts to accomplish their work and citizens who took valuable time to respond to the questionnaires. Ultimately, these contributions lead to the great success of CAS2022.

Bin Troachhey
Minister
Ministry of Planning

Preface

I am pleased to present the Agriculture Statistics Maps from the Cambodia Agriculture Survey 2022 in collaboration between the National Institute of Statistics of the Ministry of Planning and the Ministry of Agriculture, Forestry and Fisheries, with technical and financial support from the Food and Agriculture Organization of the United Nations. These maps are compiled for the benefit of policy makers for economic, social and environmental development and researchers, both domestic and foreign, government, national and international organizations.

The National Institute of Statistics conducted the first Cambodia Inter-census Agriculture Survey in 2019 after conducting the agricultural census in the Kingdom of Cambodia in 2013 to collect data on the general state of the agricultural sector, family structure, agricultural tenure, production models and production systems throughout Cambodia. Following the Cambodia Inter-census Agriculture Survey in 2019, the Cambodia Agriculture Survey has been conducted in 2020, 2021 and 2022. They provide valuable information for policy formulation and for monitoring development in the agricultural sector. It is hoped that the information obtained from the Cambodia Agricultural Survey 2022 will be the basis for further study on the resource base of agricultural production systems and the socio-economic status of rural households. Through the Cambodia Agricultural Survey 2022, it will help increase awareness of agriculture in Cambodia and help orient the national strategy to increase agricultural productivity, which will ensure sustainable rural livelihoods, security and protection of natural resources for the future.

The production of a thematic map on Cambodian agriculture in 2022 is another important achievement of Cambodia following 2019, 2020 and 2021. This report compiles 36 maps and graphs to reflect the status of households occupying agriculture, agricultural land ownership, production patterns, and the impact of the environmental change on Cambodian agricultural activities.

The production of these maps is based on the desire of the National Institute of Statistics and the Ministry of Agriculture to produce information resources that are easy to see and useful from agricultural survey data. Locational differences are easily and clearly shown in these thematic maps, giving a better understanding of the resources, patterns of production, and socio-economic status of agriculture in rural households. This information is widely covered in the latest report of the Cambodia Agriculture Survey 2022, and data can be found in more detail in the publications and on the website of the National Institute of Statistics of the Ministry of Planning.

Finally, I would like to thank the Ministry of Planning, the Ministry of Agriculture, Forestry and Fisheries and the Ministry of Economy and Finance for their support of the Cambodia Agriculture Survey 2022. I would like to thank all of you, Excellencies, Ladies and Gentlemen, Core Working Group of the Cambodia Agriculture Survey 2022, National Institute of Statistics and the Ministry of Agriculture, Forestry and Fisheries, experts from the Food and Agriculture Organization of the United Nations, and all relevant officials who were involved in data collection, analysis, compilation, reporting, and agricultural map production until the successful and high-quality

completion, as well as the 50x2030 Initiative for providing funding to support the Cambodian Agricultural Survey to end this lack of agricultural data.

I understand that this report is an important input in developing a more effective agricultural development policy program and is used as a basis to support basic indicators towards the government's "pentagon strategy" to achieve expected goals in "Cambodia Vision 2050." The Cambodia Agriculture Survey 2022 report is open for discussion and any comments or suggestions to improve the results of future agricultural survey data analysis. 77

Try Rithea
Director General,
National Institute of Statistics

Brief presentation of CAS 2022 methodology

The Cambodia Agriculture Survey (CAS), conducted in 2022 was a comprehensive survey undertaken for the collection and compilation of information on crop cultivation, raising livestock and poultry, aquaculture and capture fishing operations and associated socio-economic aspects. The data collected and generated from this survey will be useful in the formulation of plans, policies and programs for the development and improvement of the agriculture and fisheries sectors of the Royal Government of Cambodia (RGC).

The National Institute of Statistics (NIS) of the Ministry of Planning (MOP), and the Ministry of Agriculture, Forestry and Fisheries (MAFF), were the responsible government ministries authorized to undertake the CAS 2022. While NIS had the survey mandate, the MAFF will be the primary user of the data produced from the survey.

1. Objective

The main objective of the CAS 2022 was to provide data on the agricultural situation in the Kingdom of Cambodia to be utilized by planners, policy-makers, researchers and key actors in agricultural sectors. Specifically, the survey data will be useful in:

- 1) Providing data at the country, regional, and provincial levels;
- 2) Providing data on the current structure of the country's agricultural holdings, including cropping, raising livestock and poultry, and aquaculture and capture fishing activities, as well as the environment.

2. Survey scope

The CAS 2022 utilized only one questionnaire which collected data on several aspects of the agricultural holding, including demographic information about the holders, any co-holders and all household members, crop production activity, raising livestock, raising poultry, aquaculture activity, capture fishing activity, production methods and the environment during the 12 months-reference period and labor used by the holdings.

3. Survey timing and reference period

The household holdings and juridical holdings survey was conducted during October and November 2022. The 12-month period prior to 1 July 2022 (i.e., from 1 July 2021 to 30 June 2022) was used as the reference period for the data collection effort.

4. Sampling frame and sampling procedure

The sampling approach for the CAS 2022 relied fully upon the sampling of CAS 2021 utilizing a panel approach. The CAS 2021 had used statistical methods to select a representative sample of enumeration areas throughout Cambodia from the 2019 General Population Census of Cambodia Sampling Frame. Households within these EAs were screened for any agricultural activity. Using this basic information, the agricultural households were stratified and sampled for additional data collection.

All households in the country, except those located in core urban districts of Phnom Penh, Preah Sihanouk and Siem Reap provinces, had the potential to be selected in the sample of the CAS 2022. The total sample for the CAS 2022 consisted of the 15751 household agricultural holdings.

In addition to the household data collection effort, a separate data collection effort with a focus on large agricultural enterprises operated by corporations, cooperatives, government and private institutions – termed 'juridical holdings' – in the non-household sector was also conducted. Data was collected from 407 juridical holdings.

5. Survey procedure and field operations

All data in the CAS 2022 were collected via Computer Assisted Personal Interviews (CAPI) by a group of trained enumerators and supervisors directly interviewing knowledgeable respondents on agricultural holdings. The innovative use of CAPI for data collection allowed for timely monitoring of the data flow and data quality. The respondents were any adult knowledgeable of the agricultural holding's activities. The most qualified respondent was the agriculture holder. However, in his or her absence, the spouse or knowledgeable household member could also act as the respondent. It was instructed that no neighbor or other household was interviewed or asked for the information on the holding being surveyed.

All data from the CAS 2022 were collected by trained enumerators who were selected from among existing National and Provincial staff of NIS and MAFF. Field operations included training of all supervisors and enumerators, data collection and supervision. Central and field staff from the NIS and MAFF were trained before they undertook the data collection and supervision process.

Data Supervisors, all staff members from the NIS, were responsible for conducting data quality control checks. Field Supervisors from MAFF and NIS were responsible for assisting with enumerator issues in the field, encouraging good relationships with village contacts and promoting cooperation from agricultural household respondents. A total of 431 staff were involved in the data collection effort.

6. Data processing

Once the enumerators collected the survey data for an agricultural household, they submitted the completed questionnaires via Survey Solutions to their Data Supervisors who, in turn, carried out scrutiny checks. If there were errors or suspicious data detected, Data Supervisors would return the record to the enumerator to address the issues with the respondent if needed, and the corrected record would be re-submitted to the Data Supervisors. Once the records were validated by Data Supervisors, they would approve them for final review from headquarters staff. At the survey headquarters, the completed questionnaires were received after being approved by Data Supervisors. If any issues or suspicious data were discovered during the headquarters review, the records could be returned to the enumerator for verification or correction if needed. The data review and calculation of the survey estimates was undertaken using the RStudio software tool. Validation of the data began even when the questionnaires were being designed in the CAPI tool, as Survey Solutions allows for consistency checks to be built-in to the data collection tool. As soon as completed records were returned during the data collection stage, additional consistency checks were completed, in comparing reports to previous census data, evaluating ranges of reasonableness for certain items, and verifying any outlier records with the enumerator and/or respondent.

7. Publication standards

The numbers of holdings have been rounded to the closest thousand, as per the CAS 2022 survey report disclosure rules. Percentages/ratios have been calculated using these rounded values. The graphs and maps displayed in this report use these rounded values. In the data tables in this report, the (-) symbol is used in cells where zero or few observations were obtained, the number of households did not round to a minimum of 1,000 households, or there was a Coefficient of Variation (CV) of 35 or higher. Some fields may also contain the (-) symbol as a secondary level disclosure rule. Provinces with the (-) symbol are marked as “Not Available” in the maps.

8. Summary indicators

Some of the key estimates obtained from the CAS 2022 are presented below for the country as a whole.

Summary indicators: Household agricultural holdings	
Number of household agricultural holdings	1,858,500
Percentage of household agricultural holdings producing agricultural products:	
Mainly for home consumption	38.6%
Mainly for sale	61.4%
Crop production	
Number of household holdings growing crops	1,746,020
Percentage of household holdings growing crops	93.9%
Livestock, poultry and/or insect raising	
Number of household holdings raising livestock, poultry and/or insects at any time during the reference year	1,424,110
Percentage of household holdings raising livestock, poultry and/or insects at any time during the reference year	76.6%
Aquaculture and capture fishing activity	
Number of households engaged in aquaculture and/or capture fishing	505,870
Percentage of households engaged in aquaculture and/or capture fishing	27.2%
Among those households engaged in aquaculture and/or capture fishing	
Percentage of households engaged in only aquaculture from the total number of households engaged in aquaculture and/or capture fishing	10.2%
Percentage of households engaged in only capture fishing from the total number of households engaged in aquaculture and/or capture fishing	84.8%
Percentage of households engaged in both aquaculture and capture fishing from the total number of households engaged in aquaculture and/or capture fishing	5.0%
Economy	
Number of holdings reporting 60%-100% of the households' total income accounted for by agricultural income	510,380
Percentage of holdings reporting 60%-100% of the households' total income accounted for by agricultural income	27.5%
Number of households reporting any severe shock hitting the holdings or households	310,900
Percentage of households reporting any severe shock hitting the holdings or households	16.7%

Mapping methodology

1. Objective of the mapping activity

The mapping activity was conducted from July to September 2024, following the completion of the CAS 2022 data analysis. Its main objective was to produce a set of thematic maps using the CAS 2022 results disaggregated by province, and as deemed most useful by the government partners.

Mapping the agriculture-related indicators at the provincial level is expected to inform the government and development partners about the corresponding trends and dynamics within the country, and to help orientate new development policies and programs. A secondary objective was to illustrate and map Cambodia's socio-economic dynamics within the agricultural sector when relevant and as per the available data.

In producing any maps, a number of choices must be made: choices of scales, levels and periods, topics and data (quantitative or qualitative), analysis, data processing and representation methods. This document will describe these different choices and the reasons why these decisions were taken.

2. Needs assessment

The GIS Expert collaborated with MAFF and FAO experts to decide on the most suitable methodology to select the most useful and relevant maps.

The needs assessment was conducted in the form of meetings with representatives of MAFF and NIS, to finalize a list of thematic maps.

3. Methodology for map design

A thematic map is also called a special-purpose, single-topic, or statistical map. A thematic map focuses on the spatial variability of a specific distribution or theme (such as crop, livestock or ratio of area harvested to area planted). Thematic maps normally include some locational or reference information, such as map title, place names or major water bodies, scale, north arrow and legend, to help map readers familiarize themselves with the geographic area covered on the map. All thematic maps are composed of two important elements: a base map and statistical data. These two elements are usually available as digital files, such as a cartographic boundary file and census or survey data file.

Thematic maps display data about a topic or theme of interest occurring within the boundaries of selected geographic areas, such as the provinces here. The data is typically grouped into a number of value categories/classes and symbolized with distinct colors to represent each class. Thematic maps are an effective visual aid for presenting community data in an intuitive way, particularly for persons who are not subject matter experts.

Maps can quickly show the geographic concentration of housing and economic agriculture, crops, forestry, fisheries, community resources, etc. important to the Consolidated Plan process. Once created, maps are easily re-usable in a variety of formats. Maps can be employed in slideshow and printed presentations, within publications, and on a website. Maps can also be used as a presentation aid in public meetings. Presenting maps in a public meeting allows residents to visualize existing data, proposed target areas and other community needs.

Geographic information system (GIS) and desktop publishing technologies were used to produce these thematic maps. The maps in this report were made using the free and open-source software: QGIS Version 3.36. An automated map production system was developed to generate digital map files based on statistical data from the Cambodia Agriculture Survey 2022. The system used agricultural statistical data files and provincial area boundary files, to produce thematic choropleth maps. The QGIS software performed cartographic functions, including classifying data into classes, assigning symbols to represent those classes; creating and positioning map titles, legends, notes, scale bars, scale texts and north arrows; and exporting individual maps to digital image files. Colors for the thematic maps were selected from the default color ramps in QGIS, with slight modifications where necessary to improve visualization. Provinces with the (-) symbol in the data tables are marked as "Not Available" in the maps.

The statistical data and provincial areas were identified by province codes that allowed for a one-to-one relationship between the data and the provincial area. All the thematic maps were produced at a scale of 1:2,500,000. The maps were in UTM projection (Zone 48N), with Indian 1960 datum.

- *Base maps data sources:* All thematic maps were designed using the same base maps, showing international borders with neighboring countries (islands included), provincial boundaries and water bodies. These base maps were produced by official agencies, the Ministry of Land Management, Urban Planning and Construction, the Ministry of Interior and the National Institute of Statistics (NIS).
- *Thematic layers data sources:* The thematic layers displayed above the base maps utilized the tables developed during the CAS 2022 data analysis without any modifications. When needed, further calculations from the original data were made.

1. Ownership Status

Table 1.1: Holdings owning their agricultural land used: 2022

Province code	Province name	Holdings reporting owning their agricultural land used	Holdings reporting owning their agricultural land used (%)

2. Agricultural Land Size

Map 2.1: Holdings with agricultural land size less than 2 hectares in percent, by province: 2022

CAMBODIA:

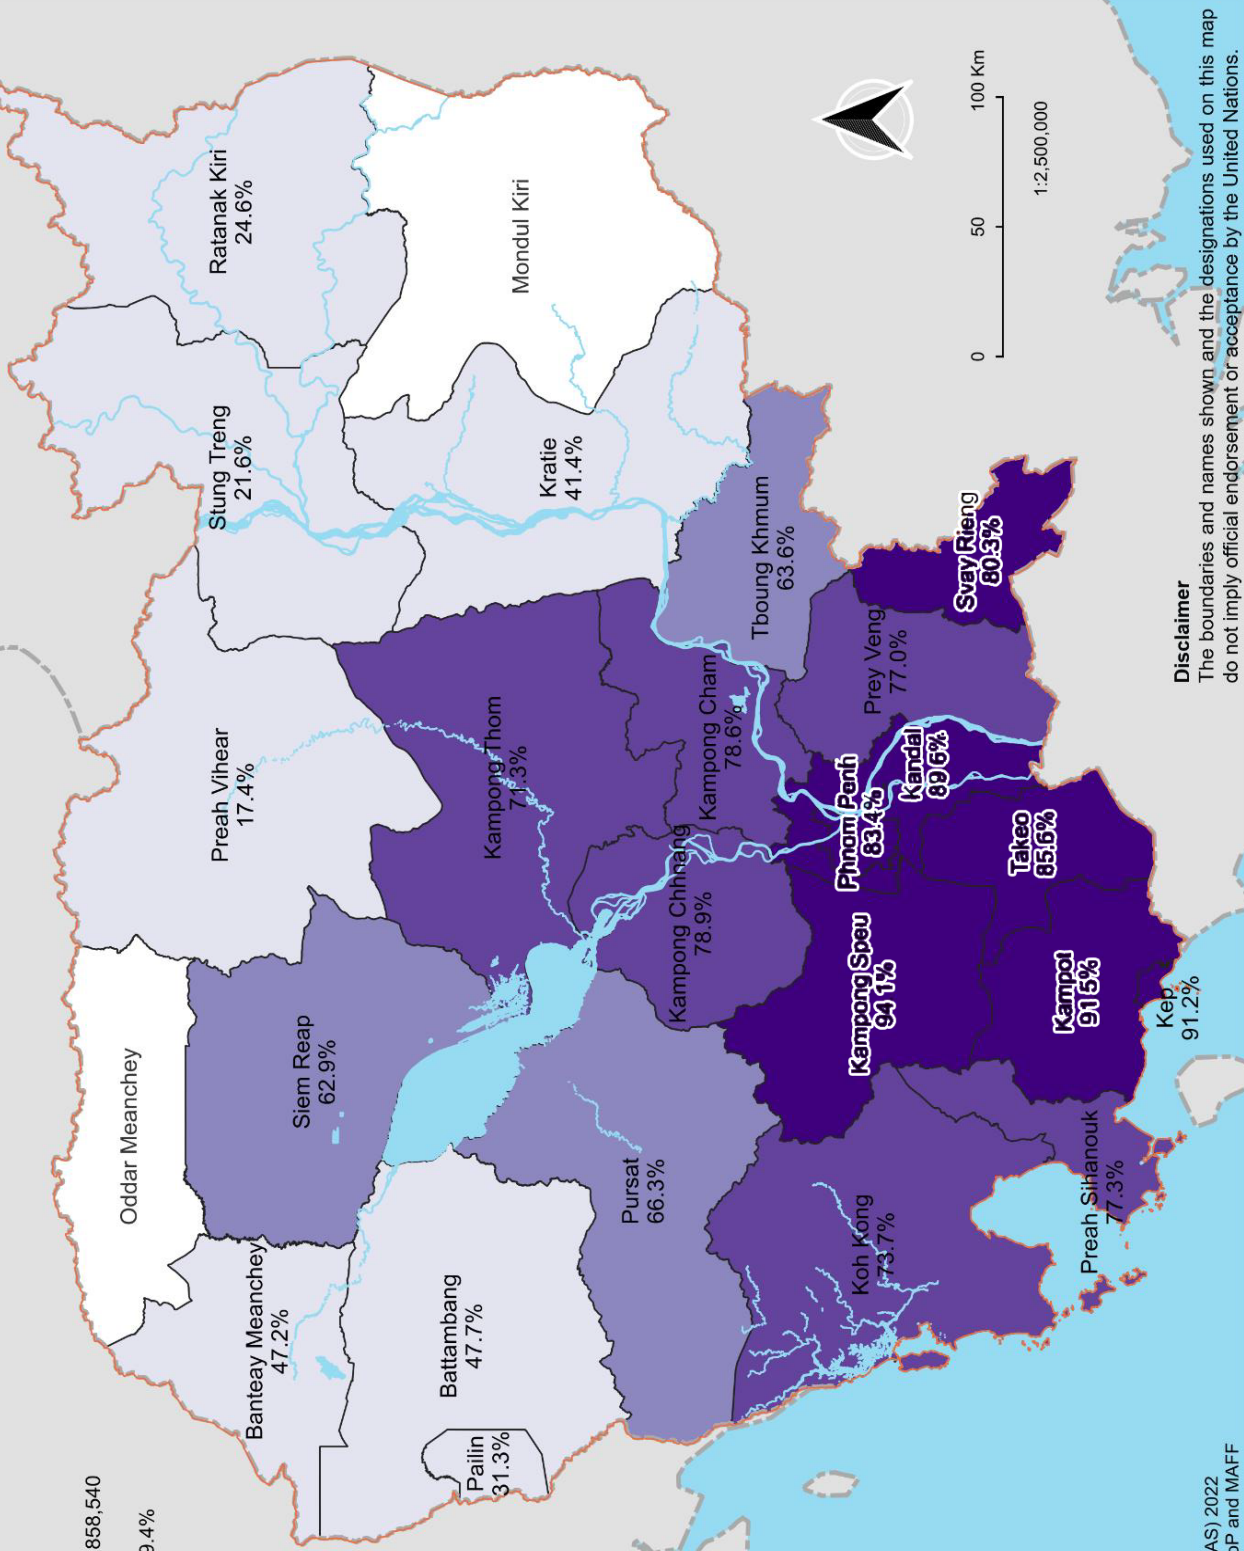

Total number of holdings : 1,858,540
 Percentage of holdings with agricultural land size less than 2 hectares : 69.4%

Nearly 70% of all sampled Cambodian household agricultural holdings reported holding less than 2 hectares of agricultural land. The highest percentage was in Kampong Speu province (94.1%), while the lowest percentage was in Preah Vihear province (17.4%).

Map 2.2: Holdings with agricultural land size of 2 to < 5 hectares in percent, by province: 2022

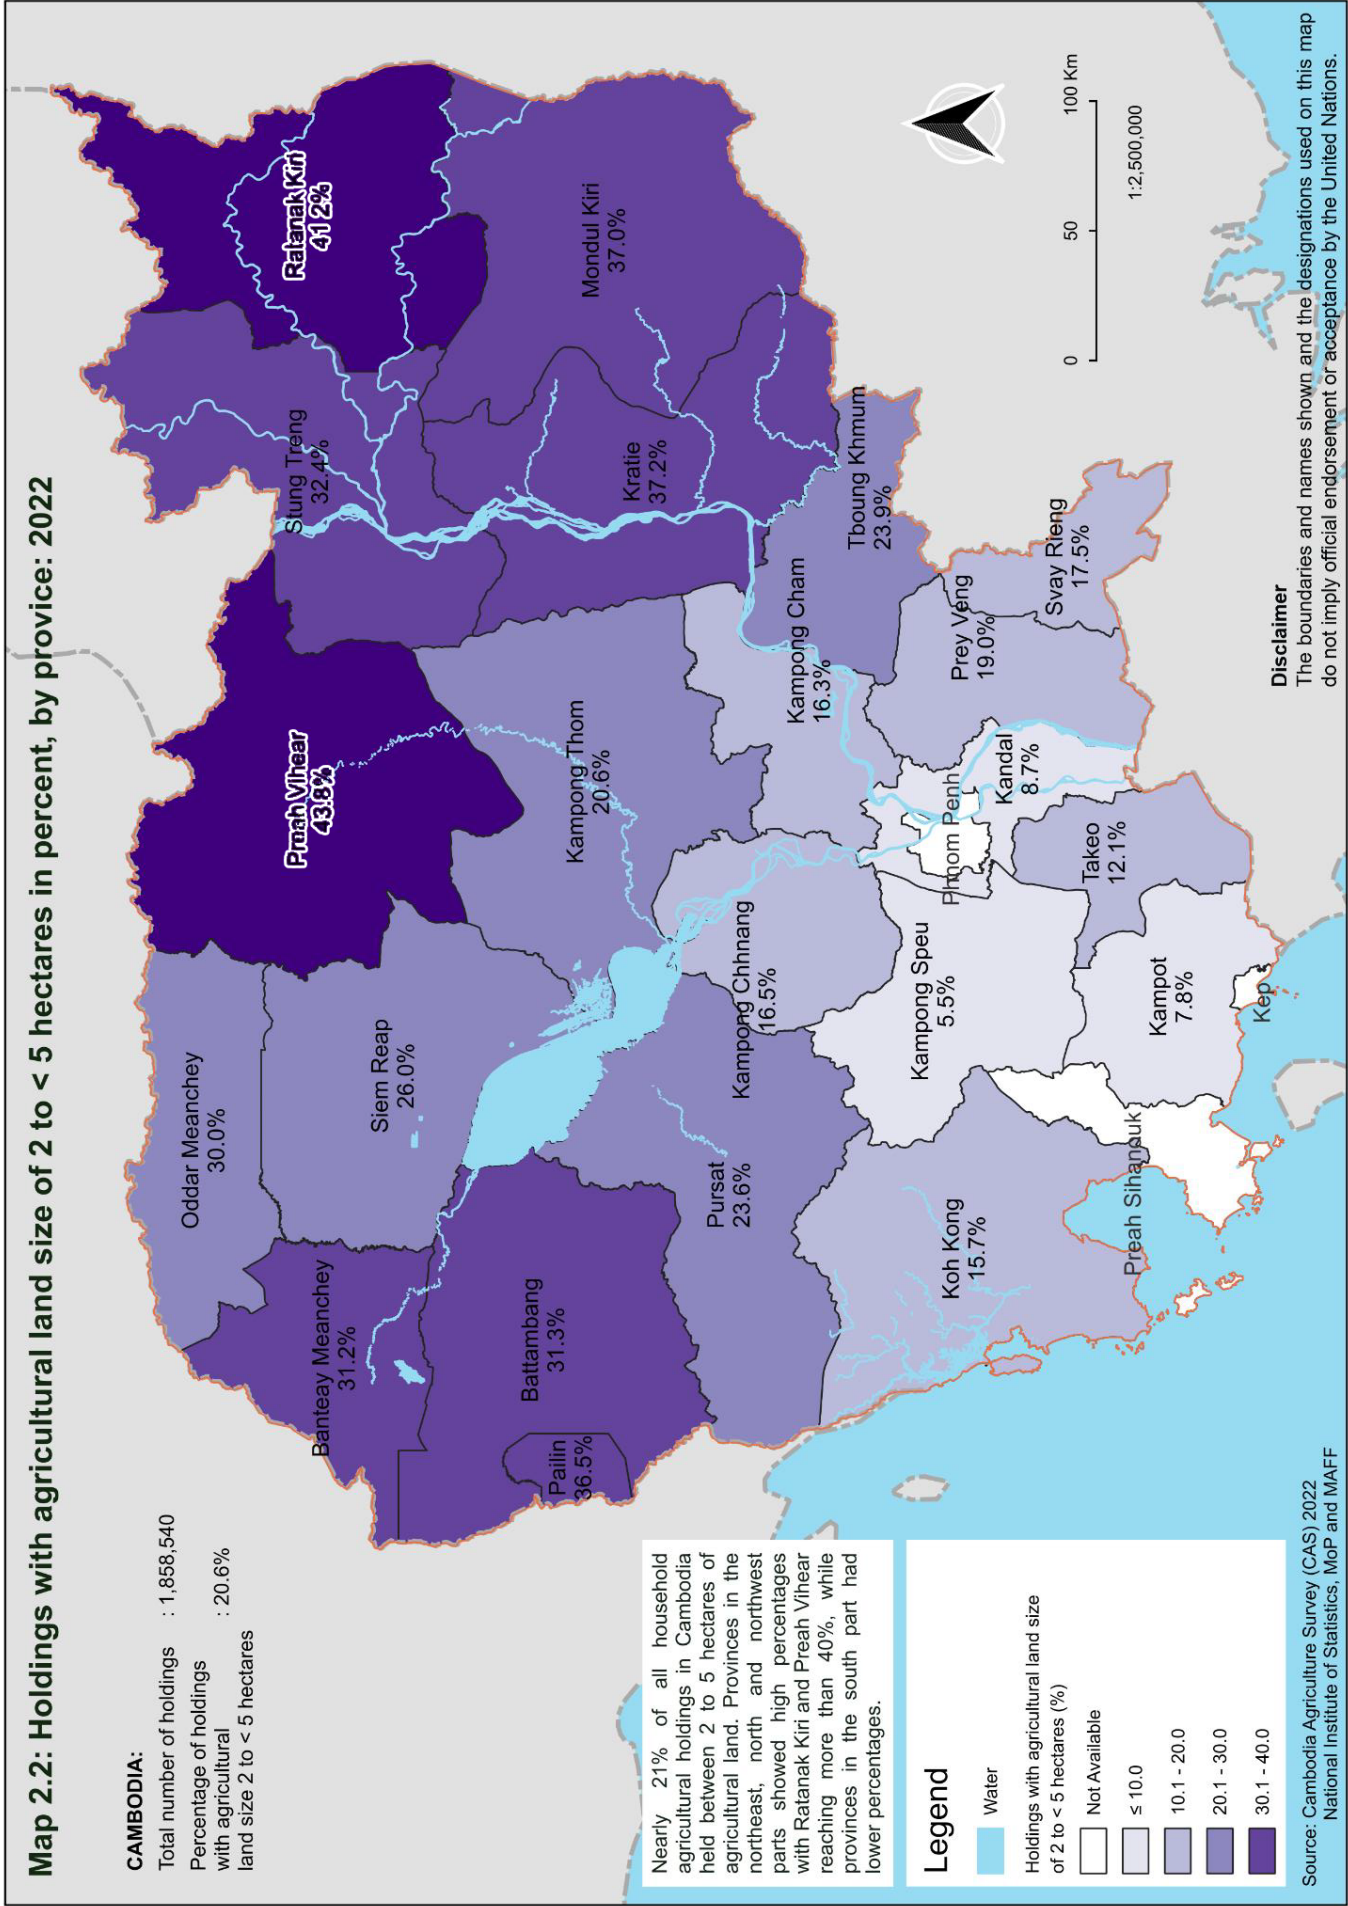

CAMBODIA:

Total number of holdings : 1,858,540
 Percentage of holdings with agricultural land size 2 to < 5 hectares : 20.6%

Nearly 21% of all household agricultural holdings in Cambodia held between 2 to 5 hectares of agricultural land. Provinces in the northeast, north and northwest parts showed high percentages with Ratanak Kiri and Preah Vihear reaching more than 40%, while provinces in the south part had lower percentages.

Map 2.3: Holdings with agricultural land size of 5 hectares and over in percent, by province: 2022

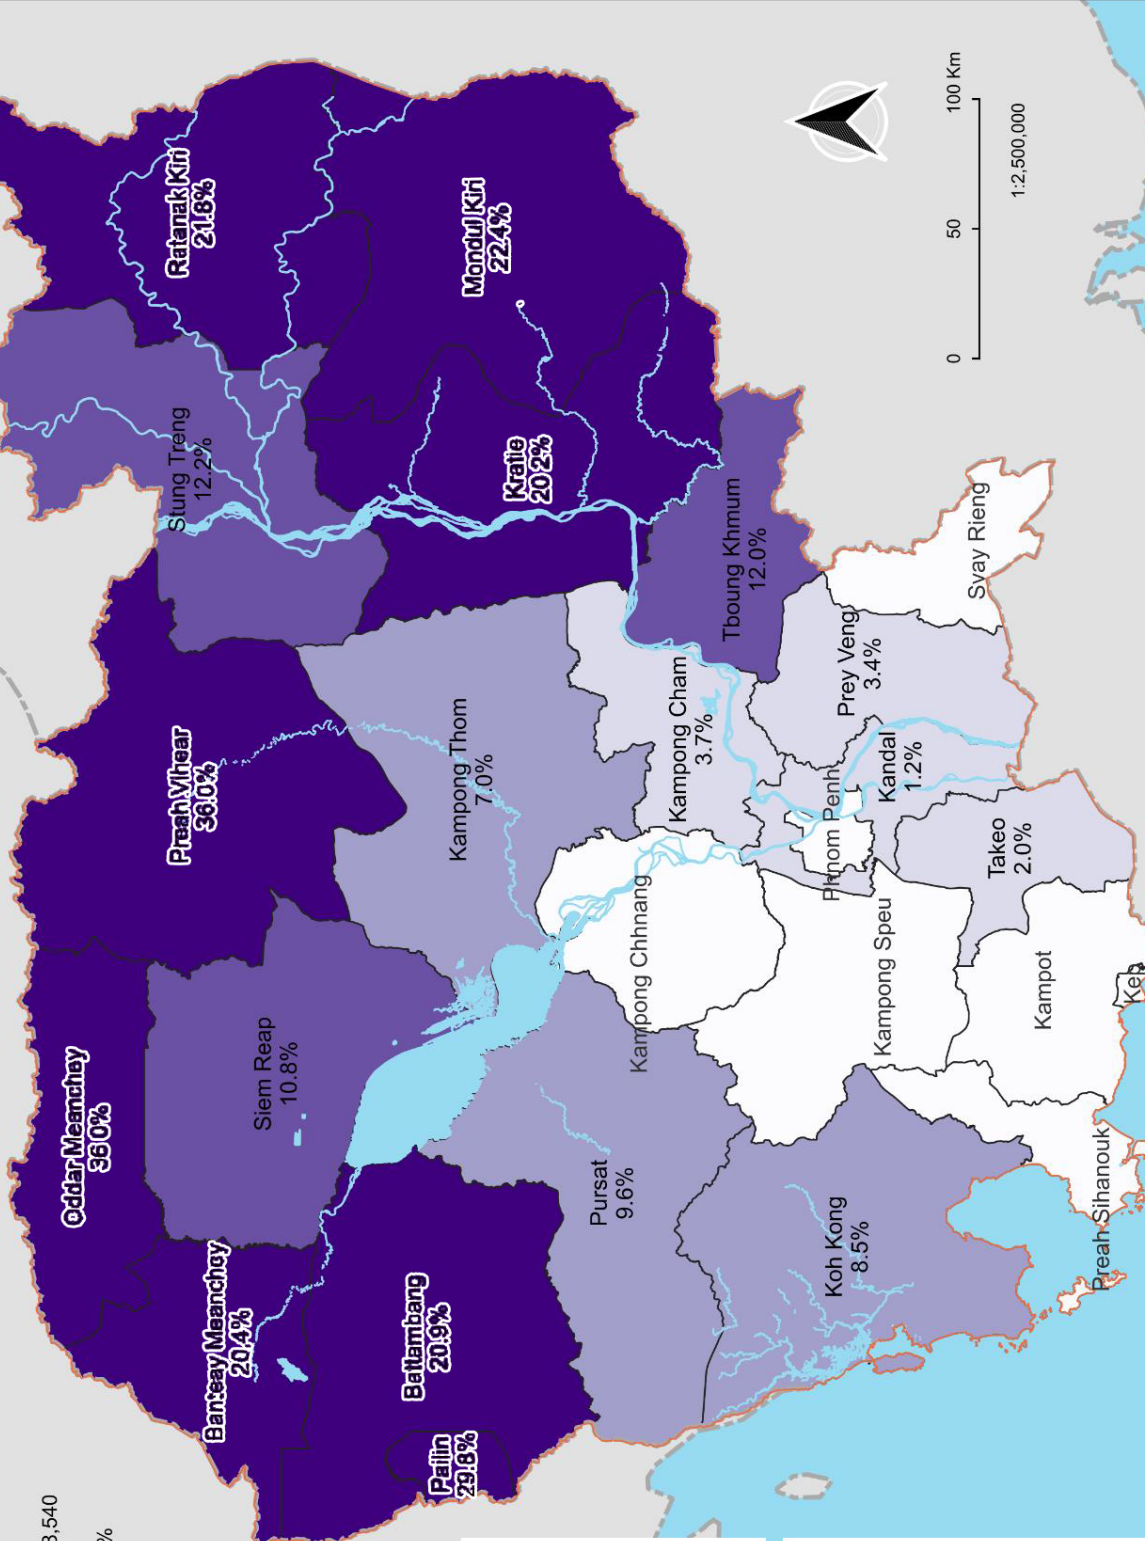

CAMBODIA:

Total number of holdings : 1,858,540
 Percentage of holdings with agricultural land size of 5 hectares and over : 10.0%

Only 10% of all household agricultural holdings in Cambodia held 5 hectares or over of agricultural land. The highest percentage was found in Preah Vihear and Oddar Meanchey provinces, while the lowest percentage was found in Kandal province. The northern provinces tend to have higher percentages of large holdings than the southern provinces.
